1999 National Conference of Family Practice Residents

Research:

7/1/01-6/30-03 UCLA Olympic Laboratory, Dr. Don Catlin- Principle Investigator
 Research involves the pharmacokinetics of pharmaceutical testosterone as it is excreted into the urine. Specifically, urinary detection of testosterone by two methods was compared to determine the most sensitive test.

6/95- 8/95 University of Rochester School of Medicine and Dentistry, Strong Memorial Hospital, Dr. Peter Harris- Principal Investigator
 Research project entailed a thirty-year retrospective patient chart analysis of many modalities involved in the morbidity and mortality of pediatric endocarditis.

1/94- 5/94 University of Wisconsin- Madison, Medical Microbiology Department Laboratory, Dr. Rodney Welch- Principal Investigator
 Worked as a lab assistant as well as conducted some independent research under the guidance of Dr. Welch, studying the pathogen Proteus. Research consisted of studying physical and biochemical characteristics of a process known as swarming only found in genus.

6/93- 8/93 University of Rochester School of Medicine and Dentistry, Strong Memorial Hospital, Dr. Peter Harris- Principal Investigator
 The research was supported by the National Lung, Blood & Heart Institute (NHLBI) and consisted of working in the division of

pediatric cardiology. Studied right ventricular size using echocardiograms of patients who had pulmonary atresia with intact ventricular septum. This retrospective investigation examined the size of the right ventricle post surgical intervention and was presented at the NHLBI poster symposium to show trends.
